

Short meeting about the parts list 1/25/2016

We have two different accelerometer

- One is for 2000G
- One is 500G
- We also have the means now to remove the objective.

For the full budget for the T-slot railing, connectors and fasteners it is around \$800.

Fasteners are the most expensive parts.

All prices are from McMaster. Need to check other sites for prices.

Ask the RoboArm where they got their connectors.

Connectors run around \$600, the railing is the rest of the price

Action Items:

Pro/Con list for new idea – Jay

Check out different prices for parts - all

Make excel sheet of the parts – Jay
